

INTELLICONE® SENTRY

The Intellicone® Sentry has been designed to detect vehicles trespassing a works entrance or designated work zone. The integral ultrasonic sensor has a range of 3 meters and requires no reflector making it easy to deploy.

The Sentry is fully compatible with other Intellicone® sensors and connects seamlessly with Intellicone® Portable Site Alarms (PSA) and Traffic Management Units (TMU) within a 30 meter range.

The Sentry has a green override button situated at the back. When held, the button temporarily deactivates the ultrasonic beam to allow authorised vehicles to pass without alarm activation.

This function has been included to support personnel manning works access points and gates.

Features

- Easy to use self calibrating technology
- Cone mountable
- Placed within 30 meters of Intellicone® PSA or TMU
- Communicates seamlessly with Intellicone® equipment
- 3m ultrasonic beam technology
- Push button override
- Rechargeable batteries with 80-hours operation
- Status indicator
- Power supply provided
